The largest flare ever recorded (X28 flare on November 4, 2003) was observed by Big Bear Solar Observatory (BBSO). The image is a BBSO Halpha filtergram from a full-disk image taken at 20:01:56 UT. The contours show RHESSI emission at 20:17:18 UT. The red contours represent the emission in the 12-25 keV energy band, the green contour - 25-50 keV and the blue contour - 50-100keV.
